Russian Railways in Russia

With its vast territory and ample natural resources, Russia needs a robust railway transportation system. Railways are the main type of transport nationally, connecting 77 Russian regions, servicing the largest cities and making a difference for their growth, industrial development, and regional integration.

Russian Railways globally

Russian Railways is a global company committed to working with partners in Eurasia, Africa, and Latin America. As at 31 December 2021, Russian Railways had representative offices in 12 countries:
